

REPLACING AEROGARDEN BOWL

(For AeroGarden Classic, AeroGarden Deluxe, AeroGarden PRO¹⁰⁰ and AeroGarden PRO²⁰⁰)

Transfer plants to *Grow Surface*:

- 1 Unplug AeroGarden; remove *Bowl* from *Base*. Take *Bowl* to sink or work surface that can get wet.
- 2 Remove *Grow Surface* from *Bowl* and place on work surface.
- 3 Pour nutrient-rich water from old *Bowl* to new *Bowl*. Discard old *Bowl*.

For young plants with small roots:

- 1 Gently lift *Pods* out of each *Grow Surface Opening*—you may need a spoon or pen to help get stubborn *Pods* loose.
- 2 Guide the roots into each corresponding *Grow Surface Opening*. Be sure all roots are hanging down through hole. Discard old *Grow Surface*.
- 3 Place new *Grow Surface* on new *Bowl* and check that roots are in water.
- 4 Return *Bowl* to *Base* and plug in AeroGarden.

- OR -

For older plants with thick roots:

- 1 Before lifting *Pods* out of holes, gently untangle roots from each *Pod*. Do not be concerned if you tear a few roots.
- 2 Gently lift *Pods* out of each *Grow Surface Opening*—you may need a spoon or pen to help get stubborn *Pods* loose.
- 3 Guide the roots out of each hole with one hand pulling on *Pod* and the other pushing roots from below.
- 4 Guide the roots into each corresponding *Grow Surface Opening* using a similar method. Be sure all roots are hanging down through openings. Discard old *Grow Surface*.
- 5 Place new *Grow Surface* on new *Bowl* and check that roots are in the water.
- 6 Return *Bowl* to *Base* and plug in AeroGarden.
