

More About Your Bounty MicroGreens Kit

With the AeroGarden MicroGreens Kit, you can use your AeroGarden to grow MicroGreens or Sprouts perfectly. Using your AeroGarden's auto-watering and grow lights, you create the perfect, easy to grow environment for these ever-so-popular delicacies.

What are MicroGreens and Sprouts?

They are nutrient and flavor packed seedlings of edible veggies, legumes and herbs, packed with nutrition and delicious "wow" flavor.

HELPFUL TIPS

Keep Lights at highest convenient level above your plants and add water if and when needed.

AeroFelt Media is biodegradable. It can be composted.

Clean MicroGreens Trays before reusing. They can be washed in soapy water or put on top rack of the dishwasher.

You can plant both trays now with same or different seeds, or plant one now and one in 3-4 days, so you always have fresh MicroGreens available.

Completely empty and change water at least weekly, twice is better. If you are changing your water once a week, you will not go dry. However, your 'water level' alert may activate during the flood cycle. This is normal. Do not add water during the flood cycle though.

Nutrients are optional, and are often not added when seed sprouting. However, if you want, you may add 4mL of your regular AeroGarden Liquid Plant Food. Greens may come up looking healthier and with higher vitamin content when using nutrients. If you add them, do so at every water change. And whether you add nutrients or not, you may ignore your AeroGarden's "Add Plant Food" alert.

AeroGarden Not Included

What's Inside

Domes (2)

AeroFelt Media (4 pc set)

MicroGreens Trays (2)

Irrigation Deck Set

SuperFood MicroGreens Mix

AeroGrow has a searchable online resource section.

AeroGrow International, Inc., P.O. Box 18450, Boulder, CO 80308-1450

Easy Planting Steps:

Unplug your Pump. Remove Grow Deck and Pump Tower from Bowl. Detach and keep Pump and Pump Base.

Also remove your 'Fill to Here' tube and magnet.

TIP Store all the removed parts for future use. Your AeroGarden will need them.

Putting together the Irrigation Deck:

- Insert Drain and Filter over the drain hole on the inside of the Irrigation Deck by dropping Drain into hole and then clipping the Filter over it into place
- Attach the Pump Tower to Irrigation Deck by snapping it into place. Make sure the Pump opening is facing the front of the Irrigation Deck (the side of the water port cover)
- Insert Pump and Pump Base under Irrigation Deck Pump Tower and snap into place
- Insert Assembled Irrigation Deck into AeroGarden Bowl making sure pump cord is sticking out in the back
- Plug Pump back in

Add water through the Irrigation Deck Water Port to the 'Fill to Here' line. Place MicroGreens trays into place and close the Water Port with the Water Port Cover.

Place AeroFelt Media inside MicroGreens Trays. Evenly distribute seeds across felt, using amounts suggested on your MicroGreens Pouch. Usually this is 4 tsp of seeds per Tray side. More is not better!

TIP If you wet your AeroFelt mats before placing, your seeds will stick to them easier.

Cover MicroGreens Trays with Domes.

TIP Raise lights to their highest level for some extra "stretch" on your greens.

Plug in your AeroGarden & follow these steps:

- Touch the 'Quick Plant' button
- After following the steps to set your Bounty's clock, select 'Herbs' from your plant selection
- Select your preferred Lights On or Off times (default On time is 8am) and finish the Quick Plant process
- Next, using your Bounty's Menu, go to Pump and select either Pump Settings or Pump Cycle (depending on your Bounty model)

- Here, using your Control Panel, change the number of Minutes On to 5 and Minutes Off to 25 (ideal Pump Cycle for MicroGreens in a Bounty Garden)

- Touch 'OK' until you are taken back to your Bounty's Homepage

You're done. Now just watch your MicroGreens grow!

TIP Start snipping MicroGreens for snacks, sandwiches, salads, smoothies and more, after 5-7 days.
