

Using The Farm 12 Trellis System

This Trellis System will support your large plants, such as tomatoes and peppers, by guiding the plants upward as they grow. Once your plants reach a height where they would benefit from extra support, attach the **Trellis System** to the **Metal Frames** of your AeroGarden as instructed below. The Trellis can be repositioned as a backwall to assist with plants that prefer to crawl up walls or fences.

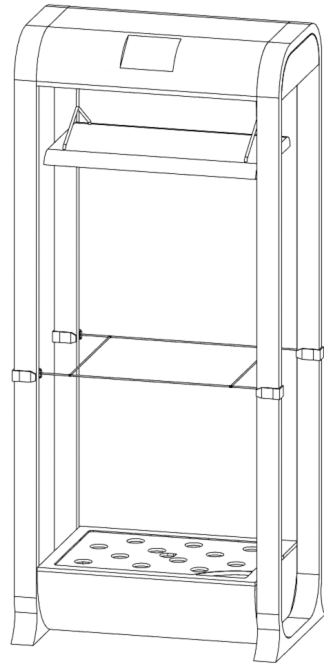

How to Assemble the Trellis System

The hooks of the long Trellis Support cords clip to the Metal Posts. Reach through and around the back Metal Posts and hook the clips from the outside in. Do the same with the other cord on the front.

Then, hook the short Trellis Support cords on to and perpendicular to the long ones, at your desired spacing.

TIP

For plants that prefer crawling up, you may use your Trellis as a back wall, by attaching both long Trellis Support cords to the back Metal Frames on your Farm with the short Trellis Support cords as connectors in between.
