

Using The Farm Trellis System

This Trellis System will support your large plants, such as tomatoes and peppers, by guiding the plants upward as they grow. Once your plants reach a height where they would benefit from extra support, attach the **Trellis System** to the **Metal Frame** of your AeroGarden Farm as pictured. The Trellis can be repositioned as plants grow.

How to Assemble Trellis System

- 1** Attach magnetic ends of long trellis cord to the opposite inner side of each of the posts on the metal frames of your AeroGarden Farm.
- 2** Pinching the clips at the end of the small trellis cords, attach them to the long trellis cords at any desired interval.
- 3** LED Lights will move between Long Trellis cords. Short Trellis cords can be positioned to allow plant support on half of the garden and easy light movement on the other half.
